COST OF COLLEGE COURSE AN INDEX TO CHARACTER FREAKS OF THE LIGHTNING

THE AVERAGE SUM PAID FOR FOUR HOW THE THUMB REVEALS TRAITS MEDIEVAL SUPERSTITIONS CON-YEARS' TRAINING IS \$1.827. OF THE MIND.

Figures Based on Reports From Educational Institutions.

From the New York Herald. The average cost of a college education in the United States is \$1,827. These figures of expenses are based on reports obtained alltime it has been divided into three parts

from twenty-one of the leading educational institutions situated throughout the length | the world-will, logic and love. of the land and vary from \$3,400 at Yale College to \$800 at the University of Nebraska. This difference is largely due to the fact that while Yale charges an annual tuition fee of \$155, the Nebraska University is free, except a matriculation fee of \$5. The reports are all based on liberal esti-

mates of annual expenses, avoiding the ex- middle phalange be much longer than the tremes of extravagance on the one hand first, reason predominates, yet the man and pinching economy on the other, for may not have the power to will himself to these extremes vary from the expenditure do that which his reason dictates. When of thousands of dollars to the saving of the third phalange is long and the thumb money on the part of students who perform is short man is revealed as the slave of work that more than pays their expenses. At Yale the students, with a few excep-tions, made itemized reports for the college expenses of last year, with the result of the following being accepted as liberal figures, avoiding all extravagance and rigid economy: Tultion, \$155; room rent, \$200; board, \$200; books, \$45; subscriptions, society dues and sundries, \$100; clothing and incidentals, \$150: \$850 in all

The Harvard Estimate.

In the report from Harvard "very liberal" figures are given at \$1.185, while the liberal figures (here followed) are \$715, allowing \$150 for clothing and incidentals. Without clothing cost, a "low estimate" is made at \$358, and the report says: "The exceptionally strong and capable student can, without injury to himself, reduce his necessary expenses below the lowest estimate."

At Princeton University the annual cost is \$603. Without clothing cost the minimum is \$331 and the maximum \$660. The clothing cost is difficult to obtain in all cases, for both the extravagant and most saving hesitate to give figures, and the difference between them is often hundreds of dollars a vear.

At Columbia University of New York the average is placed at \$547; a low estimate at of the body. If the danger symptoms are \$387, and a very liberal one at \$829. While a evidenced there are constraint is performed few exceed the highest figures, many more keep under the lowest.

Charles W. Holmes, registrar of Columbian University, Washington, gives substantially the same figures as above, only the annual tuition is \$50 less than in the New York university, and he does not give clothing, incidentals and dues, here estimated at \$150. While the annual tuition charge at Johns Hopkins University is \$150 a year, there is a smaller proportion of expenses in board,

These last figures are reduced \$100 at Cornell University, where, by the formation of clubs, students are sometimes able to reduce their expenses to \$3.50 per week for room and board, and occasionally to even less than that amount.

clothing and incidentals, which bring the

At the University of Pennsylvania \$505 is a fair estimate for the year, with \$750 a maximum—\$150 being estimated for clothing and incidentals. There are but few students who exceed this last amount. Expenses at Dartmouth.

"The estimated expense of the college year vary from \$273 to \$545," writes Chas. F. Emerson, dean of Dartmouth College. "Of course, there are men who spend much more than the larger amount and there are a few who get on for considerably less than the smaller sum. The average expense of the college student is between \$350 and \$400 per year."

Brown University fixes the medium exincrease their incomes by private instruc-tion, teaching in the evening schools, and by other occupations not inconsistent with their college duties. Tufts College makes the moderate esti-

mate of \$421. The maximum without cost of clothing is given as \$395.

Oberlin College, with a tuition fee of \$52 annually, estimates the yearly cost of \$161, with liberal figures at \$285—clothing being omitted. "The average man at Bowdoln," says the report from that college, "may be said to spend about double the actual lowest estimate for tuition, board and room rent,

i. e., 83x40x108-231x2-462. In other words, incidentals cost as much as necessaries."
"The expense here," writes E. L. Wood, registrar of Amherst College, "may be estimated from the control of the cont timated from \$400 upward, according to the taste and disposition of the individual student. About one-third of our students spend less than \$500, and a few by strict economy spend less than \$400. An average amount would perhaps be from \$500 to \$600. though this statement is only approxi-

The West Virginia University, with no fees for state students, and a tuition fee of \$37.50 for those from foreign states, esti-mates the other expenses from \$131 to \$202 per annum, without clothing cost.
The Northwestern University and the University of Wisconsin each, without the clothing item, make the average annual cost \$319, the low \$219, and the liberal \$401.

University of California. The University of California, without tuition fee, makes the total average per annum \$250, and the Leland Stanford Junior University of the same state, with the

same clothing item of \$125, estimates the annual expense at \$345.

"The average student," writes James B.
Angell, president of the University of Michards the parket was known to have passed. These impressions were photographed and enlarged, and one of them igan, "spends about \$350 a year. A large number have at their disposal \$500, while a small minority spend over \$800 a year. of the company thus betrayed him, and he small minority spend over \$800 a year.

Many students reduce the minimum, oreven eliminate it altogether, by doing outside work while carrying on their studies. The most common employments are waiting on table, attending furnaces, acting as agents for laundries, reporting for newspapers and so on. Now and then an exceptionally bright student makes money above his expenses by some original scheme But.

Some of the company thus betrayed him, and he was promptly arrested, tried, convicted and sentenced.

GREAT CITY TASKS.

Many Municipalities Busy With Extensive Public Enterprises.

From the New York Tribune. soon lose their profitableness by the influx of new competition."
"The university is free," writes E. H. Clark from the chancellor's office of the University of Nebraska. "Some go through as cheap as \$160 for the year, but the average is close to \$200, which embraces everything."

THE THERMOMETER. Evolution of This Scientific Instru

It is probably not generally known that the thermometer was invented by Galileo. When we remember that we owe to this one man not only the foundations of physical science, but also in large measure the pendulum, the compass, the telescope and the microscope, it may lead to a certain amount of modesty in our appreciation of modern inventions.

Galileo, probably in 1505, invented the

open air thermoscope. Ferdinand II of Tuscany first sealed the glass, making the instrument independent of atmospheric pressure. Many improvements were gradually made, especially in the endeavor to fix points on a definite scale, the freezing point of water being first used by Robert Hooke in 1664. Of the three thermometers still in use, Fahrenheit's thermometer was invented in 1709, Reaumur's instrument in 1730 and the scale of Calcust in use, Fahrenheit's thermometer was invented in 1709, Reaumur's instrument in 1730 and the scale of Celsius—the centigrade scale—in 1742. None of these thermometers, however, is now used in the form in which it was originally devised. It is a somewhat curious fact that the instrument construcated by the German, Fahrenheit, is used most exclusively by the English-speaking people. That invented by the Frenchman, Reaumur, is used chiefly in the north of Europe, while that of the Swede, Celsius, is used in French-speaking countries. The centigrade scale, the zero point of waler, is now used nearly universally in scientific investigations. The main objection to its common use is the length of the degree, the interval between the freezing and the bolling point of water being divided into 100 instead of 180 degrees, as on the Fahrenheit scale. This makes the length of a centigrade degree nearly twice—nine-fifths—that of the more familiar Fahrenheit degree.

Flashes Ten Miles Long.

Flammarion, the French scientist, relates those profound reasoners, those bold innovators—had infallibly very small thumbs. some remarkable instances of the freaks of lightning. The flashes, which are sometimes more than ten miles in length, have been known to kill a man, completely consuming his body but leaving him in the exact position which he occupied in life. He states that in 1838 three soldiers at Vicsur-Aisne, France, took refuge from a storm beneath a linden tree. Some time after the storm had passed peasants seeing them standing motionless and not replying to their greeting touched them on the shoul-der, when the bodies instantly crambled to fine ashes. There were no evidences of in-jury to them, the clothing being intact and their faces wearing a natural appearance. A similar occurrence is said to have taken place July 27, 1691, its truthfulness being vouched for by Pastor Butler, who was an eye-witness. Ten harvesters seeing a storm approach sought refuge under a hedge. During the storm a bolt of lightning struck and killed four of them, who remained as if petrified. One of the men was just putting a bit of tobacco in his mouth, another

had been abstracted. Two of the seals had been broken, and one had been resealed by premises. That was supposed to constitute a model town forty years ago, but Grin-nell began with prohibition and ended with Rev. George D. Herron as a professor in thumb pressure. The solution of the mys-tery baffled the most ingenious work of the best detectives until, in despair, the matter was referred to an expert in handwriting and other methods of identification. Noting the faint pressure of the thumb on the middle seal, he obtained wax impressions of the thumb of all the officials of the particular express company through when its model college.

The town of Greeley, Col., began with the same sort of prohibition, but is now known more for its fine potatoes than its sobriety. The San Francisco Call notes these efforts to establish model towns and argues that in its physical features a model town may be made or one already built may be transformed. The drainage and streets of a city are subjects of primary importance. A model city will have its streets excavatclearly agreed with the thumb-impressed seal of the broken envelope. The thumb mark of one of the most trusted officials

> The dry and wet garbage which consti-tutes city waste will be used economically in making caustic soda and potash, fertil-izers and non-absorbent brick. A common red brick absorbs its weight in water and makes a damp wall. It is already proved by works on a large scale in England that of city waste a brick of fine appearance, and non-absorbent, can be made as cheaply as the red brick.
